

HEALTH

The status of health is an important indicator reflecting social development and the quality of human life, further health care is one of the most basic human rights. Ensuring equitable access to health care regardless of people's ability to pay for health services is one of the major challenges faced by the health system today.

Margaret Chan, WHO's Director-General has placed primary health care centre-stage at WHO. At the 61st World Health Assembly in March 2008 (WHA), she spoke of three threats to international security: the global-food crisis, pandemic influenza and climate change. She said that progress towards reaching the Millennium Development Goals could be achieved by revitalization of primary health care. "Countries with solid health infrastructures and efficient mechanisms for reaching vulnerable populations will be in the best position to cope with threats to health security. If we want to reach the health-related goals, we must return to the values, principles, and approaches of primary health care."

Committed to social justice and equality in health care, the Trusts have focused on research and knowledge building on measures to promote low-cost health delivery and health financing on the one hand and studies on non communicable diseases on the other. The foci of implementation support has been primarily on health issues of

Creating awareness on adolescent health issues through the PFI-IHMP program in Maharashtra

women (adolescent girls, maternal health) as well as on community health particularly with regard to child and maternal care and child nutrition; treatment care and integration in the mainstream of the physically and the mentally challenged and the integration of the Indian Systems of Medicine. In addition, the Trusts have continued to support the creation of health infrastructure in hard-to-reach terrain.

There are very few programmatic models on how adolescent health services can be operationalized through the existing public health system. The Population Foundation of India (PFI) and the Institute of Health Management, Pachod (IHMP) have undertaken a multi-site action research project in Maharashtra, which will demonstrate the implementation of an adolescent and reproductive and sexual health (ARSH) program for married adolescents. The broad goal of the project is to demonstrate the implementation of an ARSH package for married adolescents in five districts of the Marathwada and Vidarbha regions of Maharashtra state, to build the capacity in five NGOs for program implementation and research, and to undertake policy advocacy at the local, state and national levels.

Jan Chetna Manch Bokaro is a small community-based organization that has been working in the villages of Chas and Chandankiari blocks of the Bokaro district in Jharkhand. Due to the dysfunctional health services of the government, there is an abundance of un/semi-qualified medical practitioners who provide primary health care to most villagers, and are increasingly being called to attend to women during childbirth.

The support provided is for strengthening the community-based maternity centre as well as training-cum-resource centre for training of village health workers. Training

Primary Health Care Centre run by Karuna Trust in Karnataka

offered will be in maternal and neo-natal care, preventive health, rational drug use, nutrition and growth monitoring.

The Sir Dorabji Tata Trust supports a health care model of Karuna Trust, based on Public Private Partnership. The model has been efficiently replicated across diversely different districts of Karnataka and also nine different set-ups of Arunachal Pradesh, a state entirely different in culture, setting and health care needs from that of Karnataka.

Aarohi and Kassar Trust are supported for strengthening self-sustaining management systems for primary health care in rural Uttarakhand, in which the organizations have aimed to evolve a replicable health system. An outcome of the last three years will create a network of health NGOs in the state for whom this current project will serve as a prototype model.

Scaling up services in the community for people with mental illnesses is a priority international public health concern, especially in low-income countries where the treatment gap is appalling. Amongst the other projects that the Trusts support is Basic Needs India, Karnataka. The model operates on the philosophy of the creation of a different and better world for mentally ill people through the community's understanding of mental health and the resulting positive response of inclusion and ownership. The comprehensive dementia care project is being supported through

a project of the Alzheimer's and Related Disorders Society of India (ARDSI). ARDSI's care and support to people with dementia includes day care and home care services. Research on people with dementia is an important part of their work as well. Disorders such as dementia and Alzheimer's are emerging as a serious public health issue as they impact the lives of millions of older persons and their families.

The Trust has supported the preparation of an innovative model to enhance emotional and social competence of economically disadvantaged school children in the city of Mumbai through a grant to the Bombay Community Public Trust.

Initiatives undertaken during the year have been to develop programs under gender-based violence and public health. One such program supported by the Sir Dorabji Tata Trust is Society for Nutrition Education and Health Action (SNEHA), Mumbai to evolve a model project on eliminating violence against women in urban communities.

The 285 million urban population in India accounts for 28 percent of the country's total population, a number that is estimated to double by 2025. Approximately one-fourth of urban India, comprising over 70 million persons, lives in slums or illegal settlements without basic infrastructure and public services. The health of the urban poor is much worse than that of their better off neighbours and sometimes even of their

Primary Health Care Centre in a remote region of Arunachal Pradesh run by Karuna Trust

Pharmacy in Bameng, Arunachal Pradesh, set up by Karuna Trust, servicing the inaccessible region and communities

rural counterparts. In this context, support has been extended to Mamta Health Institute for Mother and Child who have been working to bring about sustainable improvement in maternal and child health conditions among the urban poor in New Delhi.

Receiving help and cure at the ARDSI Day Care Centre in Kochi

Peace Trust, has been working on improving medical facilities in government hospitals in Perambalur district, Tamil Nadu which are served by the statewide health delivery system run by the state government. The grant is for the upgradation of medical equipment in order to ensure timely and effective health service.

As is widely accepted, deficiencies in the public sector health system and ensuring equitable access to health services call for significant reforms. However there is no single strategy that can serve as the 'best option'. While proposed reforms are not cheap, the cost of not reforming is phenomenal.

DISABILITY

By all accounts, India is home to the largest number of persons with disability in the world. The 2001 census of the country estimated their number at 22 million. However, according to many observers the actual number of Indians with temporary and permanent disabilities could be as high as 50 million. Although the Constitution of India guarantees persons with disabilities the full range of civil, political, economic, cultural and social rights, the arrangements necessary to translate the constitutional guarantees into reality have been conspicuously absent till recently.

The dominant social attitude towards persons with a disability has been one of pity, from which springs insidious forms of discrimination the eventual source of their exclusion and extreme isolation. While many marginalized social groups have been able to project their specific social experiences of discrimination and their aspirations onto the wider social plain for discussion and debate, interventions from the disabled have been minimal as they lead dispersed social lives that make their discrimination appear as individual problems. This is exemplified in the Constitution of India that prohibits discrimination on grounds of religion, race, caste, sex or place of birth (Article 15) but does not explicitly mention persons with disability as a group to be protected against discrimination.

The past decade has also witnessed an unprecedented process of change that has positioned disability in the centre of a debate that focuses on the idea of 'society for all'. This calls for redefining the notion of the social 'mainstream' that is appreciative and accommodative of the difference, instead of expecting various inherently different minorities to fit into the so-called mainstream culture.

Despite many obstacles that need to be overcome, the human rights approach to disability has led to the evolution of an impressive legal framework and positive

jurisprudence that has clarified the content of rights in the context of disability.

The Trusts have supported work on disability over a period of time, however when viewed in the context of the current situation in the area of development focused work in disability, the identified thrust areas include the following:

- Early intervention
- Community-based approaches to providing care and rehabilitation
- Skill development
- Employment

Arushi, founded in 1992, is a Bhopal-based NGO working for people with disabilities and the issues related to them. The basic objective of Arushi's work is to generate opportunities and develop capacities in people with disabilities so as to empower them to be able to make their own life choices and live a better life. Arushi has developed a modern centre catering to all types of disabilities in the heart of Bhopal city through a 3,500 square feet plot which was provided by the government. The building serves both as Arushi's office, as well as a resource centre. The three-storied building and the resources provided therein have been designed to be disabled-friendly. The building which houses the audio library has a vast collection (approximately 12,000 hours) of audio cassettes and compact discs containing study material required by the visually impaired. It also contains a recording studio which can undertake audio recording in any language for any subject. This collection is one of the largest of its kind in India. The grant currently supports the resource centre.

The Association of People with Disability (APD) was founded in 1959 in Bangalore. APD has responded to the needs of disabled individuals through an array of programs that include service provision, vocational training, advocacy, community-based rehabilitation and many others. APD's experience in the field clearly indicated a need for providing relevant training to disabled people from the rural areas.

Horticulture was a response to this need and the idea emerged from the fact that Bangalore city was expanding with new industries and a highly aspirant middle class who would want gardens and gardeners to tend to them. The critical feature of the training is that it includes training the participants on individual living skills and disability management. The horticulture training program at APD is supported by the Sir Dorabji Tata Trust.

Other initiatives supported by the Trust during the year include Om Creation Trust, Mumbai who work with mentally challenged women; Helen Keller Institute for Deaf and Deafblind,

Mumbai whose pilot project is to provide computer-based education amongst the deafblind persons; and Helpers of the Handicapped, Kolhapur which has a comprehensive rehabilitation program for the disabled in rural Maharashtra.

Strategic inputs towards strengthening the sub-category on the portfolio are to:

1. Proactively develop disability programs in states where support does not already exist.
2. Create a forum for learning and exposure.
3. Identify best practices/innovations and facilitate documentation and dissemination.

Learning to count in Braille at the Arushi Centre in Bhopal

Experiencing the joys of learning at the Arushi Centre, Bhopal

Working with seedlings at APD's horticulture training centre, Bangalore

Tending to the plants at the APD nursery translate into livelihood options for the disabled

Through the efforts of Arushi, a railway station in Bhopal becomes disabled-friendly — facilitating the access of the blind

	Rupees in Million	
Sir Dorabji Tata Trust		
1 Aarohi, Uttarakhand - Towards developing a viable cost effective community health model with Kassar Trust as an equal partner and to network with organizations to evolve a self-sustaining management system for primary health care in rural Uttarakhand.	11.07	2.51
2 Alzheimer's and Related Disorders Society of India (ARDSI), Kerala - Towards the consolidation and expansion of the ongoing activities of the comprehensive dementia care program being implemented in Kochi.	2.06	1.03
3 Anjali, West Bengal - Towards the continuation and scaling up of Anjali's rehabilitation and reintegration program in Pavlova and Lumbini Park Hospitals.	4.13	1.40
4 Anweshi Women's Counselling Centre, Kerala - Towards enabling Anweshi Women's Support and Advocacy Centre to consolidate its activities which include counselling, the legal aid cell, community work, advocacy and strengthening of the library and documentation centre; and for meeting the running costs of a Short Stay Home, a safe shelter for women and children.	8.65	2.85
5 Arushi, Madhya Pradesh - Towards establishing the Arushi Disability Resource and Information Centre (ADRIC) to meet the objectives as stated in the project.	4.80	1.73
6 Association of People with Disability (APD), Karnataka - Towards the implementation of a horticulture project for people with disabilities.	8.90	2.85
7 Banjara Development Society, Andhra Pradesh - Towards advocacy and capacity building for health and development of the notified Chenclu tribes.	6.00	1.77
8 Babu Trust for Research on Mind and Discourse, Maharashtra - Towards meeting the costs of: A) Centre for Advocacy in Mental Health B) Saher - the community mental health service program for women. In addition, Babu Trust will conduct two research studies on mental health in Pune.	8.10	2.46
9 Basic Needs India, Karnataka - Towards the implementation of a community mental health and development model across eight states in the country.	15.94	2.65
10 Child In Need Institute (CINI), Bihar - Towards implementing the Life Cycle Approach project for reproductive and child health services in two divisions of Jharkhand through two partner NGOs, Lohardaga Gram Swaraj Sanstha in Palamu division and Nav Bharat Jagrati Kendra (NBJK) in North Chhotanagpur division respectively.	10.00	2.85
11 Community Development Centre, Madhya Pradesh - Towards empowering local panchayats on health-related issues in 18 villages of Lalburra block in Balaghat district, Madhya Pradesh. The project will be implemented with two other organizations namely Gramin Vikas Mandal and Swasthya Sanrakshak Samiti.	2.08	0.58
12 Dhara Sansthan, Rajasthan - Towards support of a pilot project drawing linkages between livelihood and health; to demonstrate the effective role of SHGs in health management and the effective linkages of development with health.	2.44	0.89
13 Jan Chetna Manch Bokaro, Jharkhand - Towards the operation of the women's health and resource centre, which includes infrastructure facilities and equipping of the operation theatre and laboratory.	5.00	2.25
14 Jan Jagaran Samiti, Uttarakhand - Towards the expansion of Phase II of the Dena Hospital. This grant is given towards construction of the Dena Hospital and equipping the operation theatre, intensive care unit and ophthalmic unit. In addition, the grant will cover the recurring costs towards operationalizing Phase II of the Dena Hospital.	27.00	3.25
15 Jan Swasthya Sahyog, Chhattisgarh - Towards a Corpus Grant of Rs 30.00 million and a Program Grant of Rs 9.60 million. The Program Grant is towards supporting the community health centre and program. The Corpus is towards strengthening Jan Swasthya Sahyog's role		

Name of Grantee	Sanction Amount	Disbursed 2007-08
